# Webinar Summary

Student, lecturer and staff mobility is increasing. Researchers travel around the world to participate in conferences. Digital solutions for exchange require up-to date technical equipment and energy. At the same time, higher education institutions as well as other agencies and foundations fostering mobility and exchange at global, European and national levels, are taking action to make mobility and exchange as green as possible.

Against this backdrop, we invite you to join us to get inspired by ongoing initiatives as well as to reflect on what national and European organisations and networks could do to better reconcile international exchange and climate action.

Main target audience:

- multipliers/EU liaison officers, representing e.g. national ministries, regions, Erasmus+ national agencies, research funding agencies, higher education networks;
- representatives of European institutions engaged in the topic, e.g. European Parliament.

Others, e.g. representatives of individual higher education institutions are welcome to join if capacity of the webinar allows.
